

Energy Efficiency Program Design and Implementation

The course objective is to support any organization or individual who wants to offer energy efficiency programs, and to give advice and recommendations in order to avoid any costly mistakes resulting from a lack of knowledge or, most commonly, a lack of experience in this specialized field of activity. The session aims at reaching excellence by applying the “do the right thing, the right way, the first time” principle.

This is a two days session due to the multiple subjects covered and their diversity. There is a three-day option for those who wish to have an “In-Basket” session where they will design a new program of their choice based on what they learned in the two-day session.

Topics Covered

This session covers all activities and steps necessary to design and implement Energy Efficiency Programs of any kind and in any market. It is presented in seven modules:

- General Notions on Energy Efficiency
- Market Research
- Program Design
- Packaging and Marketing
- Implementation and Tracking
- Market Transformation Programs
- Program Evaluation

The session explains to trainees all the steps necessary to design, develop, market and implement energy efficiency programs, supported by specific examples of real situations experienced by the trainers over the last 30 years.

Partner: *This training is presented in collaboration with the **Bureau d'Etudes Zariffa Inc.***

Target Clientele

This short thematic course is ideal for the following clientele:

- Managers of energy efficiency cells or units
- Government, private or public agencies personnel offering energy efficiency programs and activities
- Regulatory energy or utility boards personnel
- Utilities personnel responsible for energy efficiency programs and activities

Logistics

Energy Efficiency Program Design and Implementation is offered in classroom and can be offered on-site, anywhere, for groups of 15+ participants.
